VIDEO SCRIPT - TASK 3 MNIST INPAINTING (SHORT VERSION)
Ajidan / Group Ajc / ~60s / ~70 words
file: template_solution.py
=====
```

QUICK OVERVIEW

TIME	SHOW	TOPIC
0-06s	WEBCAM	Intro
06-16s	(optional masked sample)	Task
16-25s	code L69-73	Data masking
25-37s	code L148-233 (+L226, L230)	U-Net model
37-50s	code L117-125 + L135-137	Training & loss
50-57s	WEBCAM	LLM disclosure
57-60s	WEBCAM	Outro

```
=====
[0-06s]  INTRO                                >>> SHOW: WEBCAM
-----
```

"Hi, I'm Ajidan from group Ajc."

```
=====
[06-16s] TASK                                >>> SHOW: masked example (optional)
-----
```

"Our task: reconstruct the masked 8x8 center of MNIST digits, evaluated by MSE on those pixels."

```
=====
[16-25s] DATA                                >>> SHOW: code  L69-73
-----
```

```
train_data_input[:, :, 10:18, 10:18] = 0.0
```

"We zero out the center 8x8 pixels of each image; the full image is the label."

```
=====
[25-37s] MODEL                                >>> SHOW: code  L148-233
                                           (highlight L226 + L230)
-----
```

```
cat1 = torch.cat([up1, enc2], dim=1)
cat2 = torch.cat([up2, enc1], dim=1)
```

"We use a U-Net autoencoder. Skip connections pass detail from encoder to decoder."

```
=====
[37-50s] TRAINING                            >>> SHOW: code  L117-125 + L135-137
-----
```

```
loss = loss_full + 9.0 * loss_masked
```

"We train with Adam for 30 epochs, using MSE weighted 9x on the masked region, so the model focuses there."

```
=====
[50-57s] LLM DISCLOSURE          >>> SHOW: WEBCAM
-----
```

"Disclosure: we used a large language model to assist during development."

```
=====
[57-60s] OUTRO                  >>> SHOW: WEBCAM
-----
```

"Thanks for watching!"

```
=====
NOTES
-----
```

- Total: ~70 words. At your pace (~76 wpm) this fits in ~55-58 seconds, leaving a small buffer.
- If still tight: drop the optional masked-example shot and start straight from the code.
